¹ The alef is only being used to show the position of the vowel points and is not part of it.

² Qamats-hatuf and qamats are written the same but pronounced differently. The rules indicating which is being used are complicated, but qamats is far more common, so assume that it is qamats (a).

³ The difference between the vocal and silent shewa is fairly complicated, but the basic idea is that the silent shewa is used to mark the end of a syllable.
